Notepad++ configuration tips to make editing Scheme files easier

Notepad++ configuration: associate .ctl files with Scheme highlighting

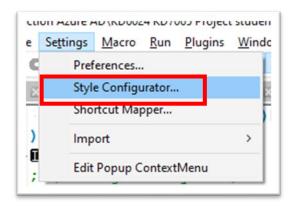

- 1. Go to **Settings** > **Style Configurator**
- 2. Under Language, scroll down and highlight "Scheme"
- 3. At the bottom, under User ext. type in "ctl"
- 4. Press Save & Close
- 5. Open your file and it should now highlight properly.

```
Search View Encoding Language Settings Tools Macro Rui
       (define-param dl 0.5)
       (define d2 (- 1 d1))
      ; resolution and number of bands to compute
       (set! resolution 64)
       (set-param! num-bands 3)
        lattice definition
     (set! geometry-lattice
         (make lattice
           (size 1 no-size no-size)
11
12
      ; define k-points
     (set! k-points (list
14
         (vector3 -0.5 0 0)
15
         (vector3 0
                      0 0); Gamma
16
         (vector3 0.5 0 0)))
       ; add extra k-points
       (set! k-points (interpolate 10 k-points))
19
      ; define the geometry
     (set! geometry (list
        (make block
23
           (center -0.25 0 0)
24
           (material (make dielectric (epsilon 12)))
25
           (size dl infinity infinity))
26
        (make block
27
           (center 0.25 0 0)
28
           (material (make dielectric (epsilon 1)))
29
           (size d2 infinity infinity))
30
31
      ; start the computation
32
      (run-tm)
```
